

Golden Visa Application & Management Platform

Technical Specification & Go-Live Guide — goldenuae.xyz

Updated per your latest answers: corrected fees, a referral/commission system, a full property valuation workflow, and a concrete guide to the accounts/APIs needed to take this from prototype to live.

1. Summary

Three products, one platform:

- **Investor Visa** (AED 10,000) — held by whoever is named on the property's title deed (AED 2M+). This is the visa that *pledges* the property.
- **Dependent Visa** (AED 7,000 per person) — spouse, child, parent, sibling, or domestic staff, sponsored under an Investor's pledged property.
- **Property Valuation** (AED 5,500) — a standalone independent valuation report, usable on its own or ahead of an Investor Visa application.

Two surfaces: `goldenuae.xyz` (public site + user portal) and `goldenuae.xyz/admin` (staff dashboard).

2. Recommended Stack

Layer	Choice	Why
Frontend	Next.js 14 (App Router) + TypeScript + Tailwind	One repo serves <code>/</code> and <code>/admin</code> ; SSR helps the marketing pages.
Backend	Next.js Route Handlers , split to Node/Express only if OCR/payment volume outgrows serverless	Keep business logic in <code>/lib</code> so it's portable.
Database	PostgreSQL (Supabase or RDS)	Job orders, documents, payments, and commissions all need relational integrity.
ORM	Prisma	Type-safe schema + migrations.
File storage	S3-compatible (AWS S3 / Cloudflare R2), private, signed URLs	Title deeds, passports, certificates, valuation reports.
OCR	AWS Textract (or Google Document AI)	See §6 for real pricing.
Auth	NextAuth (Auth.js)	See §7 – phone-as-password needs a mitigation.

Layer	Choice	Why
Payments	Telr primary recommendation for a UAE-first, fast-onboarding merchant	See §6 for a real comparison.
Email	Resend or AWS SES	Invoices, receipts, re-upload/status notifications.
Hosting	Vercel (app) + Supabase (Postgres + storage)	Fastest path to production.
Background jobs	Inngest or BullMQ + Redis	OCR runs, payment webhooks, emails — async, not blocking requests.

3. Domain & Routing

goldenuae.xyz/	→ Home: hero, about, services (3 products + prices), testimonials
goldenuae.xyz/login, /register	→ Auth
goldenuae.xyz/apply/visa	→ Investor /
Dependent wizard	
goldenuae.xyz/apply/valuation	→ Property
valuation wizard	
goldenuae.xyz/payment	→ Invoice,
referral code, payment method	
goldenuae.xyz/dashboard	→ One card per
job order	
goldenuae.xyz/dashboard/[jobOrderId]	→ Document
upload for that job order	
goldenuae.xyz/admin	→ Staff login

goldenuae.xyz/admin/overview	→ Revenue, job order counts, pending reviews
goldenuae.xyz/admin/job-orders	→ Queue + detail (documents, stage controls)
goldenuae.xyz/admin/referrals	→ Referral code creation + commission ledger
goldenuae.xyz/admin/content	→ Landing page copy editor

4. Database Schema

```

users
  id, email (unique), phone, password_hash, role
[user|admin|reviewer], full_name, created_at

applications          -- one payment event,
may cover several people
  id, application_ref, user_id → users, type
[investor_visa|dependent_visa|property_valuation],
  billing_name, referral_code, referral_valid,
referrer_name, commission_earned_aed,
  commission_payout_status [unpaid|paid|null],
payment_method, amount_aed, paid_at,
  invoice_url, receipt_url, created_at

property_details      -- investor route, one
per application
  application_id → applications, ownership_type
[full|mortgaged|offplan|shared],
  ocr_value_aed, ocr_name, ocr_developer,
ocr_project, ocr_purchase_date,
  ocr_mortgage_status, ocr_offplan_status,
ocr_payment_plan, ocr_confidence, ocr_raw_json

job_orders            -- ONE ROW PER PERSON
PER VISA, or one per valuation
  id, job_order_number (unique), application_id →

```

```

applications, user_id → users,
  kind [visa|valuation], holder_name,
  relationship
[investor|wife|husband|son|daughter|parent|sister|sib
ling|servant|property_owner],
  sponsor_job_order,      -- optional link to the
investor's job order, dependent route only
  amount_aed,
  doc_phase
[awaiting_upload|submitted|needs_reupload|verified],
  -- visa fields:
  dld_status [pending|approved], gdrfa_status
[pending|approved],

referral_codes
  id, code (unique), referrer_name, referrer_contact,
  commission_type [percentage|flat],
commission_value, active, created_by → users,
  created_at

status_history
  id, job_order_id → job_orders, field, from_value,
to_value, changed_by → users, note, created_at

```

```
content_blocks
  id, key, value, updated_by, updated_at
```

5. Key Workflows

5.1 Investor Visa

1. Upload title deed / valuation → OCR extracts `value`, `name`, `type`, `developer`, `project`, `purchase_date`, `mortgage`, `off-plan/ready`, `payment_plan`.
2. Eligibility: `value >= 2,000,000 AED`.
3. Checklist: passport (front/back/cover) + UAE visa page always; title deed if full ownership (+ NOC from bank if mortgaged); Oqood contract + SOA/NOC from developer if off-plan.
4. Optional: sponsor dependents in the same application — each becomes its own job order at AED 7,000.

5.2 Dependent Visa

The sponsor is the Investor whose pledged property backs the dependent's eligibility — not a generic third party. The form takes an optional **sponsor job order number** to link the two records; sponsor documents (Emirates ID, visa copy, passport) are collected either way since a dependent application can also be submitted before the investor's own visa has finished processing.

- Relationship picker: wife, husband, son, daughter, parent, sister, sibling, servant.
- Relationship document: wife/husband → attested marriage certificate; son/daughter → attested birth certificate; parent → sponsor's birth certificate; **sister/sibling → attested birth**

certificate (per your confirmation); servant → offer letter from sponsor.

5.3 Property Valuation

1. Property details: type, location, size, purpose (general / ahead of Golden Visa / sale / mortgage).
2. Documents: title deed or Oqood contract, passport copy, optional site photos.
3. Payment: flat AED 5,500 → one job order (kind = `valuation`, not tied to a person's visa).
4. After documents are verified, the job order moves through **Received → Assessment → Report preparation → Ready**, with admin entering an estimated value and notes; the applicant can download the report once marked Ready.

5.4 Payment & Job Order Creation

1. Invoice: **Investor = AED 10,000** (once) + **AED 7,000 per sponsored dependent**; standalone **Dependent = AED 7,000 per person**; **Valuation = AED 5,500 flat**.
2. Referral code (optional): validated against `referral_codes` at payment time. If valid, commission is calculated (`% of invoice` or `flat AED`) and recorded on the invoice as `unpaid` until an admin marks it `paid` .
3. Payment method selection, billing name — invoice generated server-side, payment confirmed via provider webhook (never client-side only).
4. **One job order number is generated per person** (investor + each dependent) or **one per valuation request**. Receipt and invoice emailed and offered as download.

5.5 Document Upload & Verification

Same as before: per-job-order checklist, upload, submit; admin approves/rejects per document with a required rejection comment; all-verified unlocks the next stage panel for that job order (government stages for visas, assessment stages for valuations).

6. Vendor & API Guide — What to Actually Buy

This is the part that turns the prototype into a live product. Costs below are current market rates as of mid-2026 — confirm exact pricing at signup since providers adjust tiers.

Payments

Real UAE options and how they actually compare:

Provider	Onboarding time	Typical rate	Notes
Telr	5–10 business days	~2.49–2.69% + AED 0.50–1.00/txn, or AED 349/mo entry plan with no per-transaction commission	Best starting point for a UAE SME: online onboarding, zero setup fee, Tabby (buy-now-pay-later) built in, strong support for local cards. This is the recommended default for launch.

Provider	Onboarding time	Typical rate	Notes
Network International (NI)	2–4 weeks (goes through a UAE bank)	Negotiated, ~1.9–2.9% + AED 1, drops with volume	The default if you already bank with a UAE institution; best chargeback/settlement infrastructure, but slowest onboarding. Worth it once volume justifies the wait.
Stripe	24–48 hours	2.9% + AED 1	Fastest to integrate and has a UAE-domiciled entity (Stripe Payments AE), but weaker acceptance rates on some UAE-issued cards versus Telr/NI, and no native Mada support.

Action: sign up for a Telr merchant account (telr.com), complete their online onboarding (trade license, bank IBAN, basic KYC), get sandbox + live API keys, and integrate their hosted payment page (keeps you out of PCI-DSS scope). Register your webhook URL with them so payment confirmation happens server-side, not client-side.

OCR (title deed / Oqood extraction)

Provider	Pricing	Notes
AWS Textract	Plain text: ~\$1.50/1,000 pages · Forms:	Pay-as-you-go, no monthly minimum — the right choice at your expected volume. A

Provider	Pricing	Notes
	~\$50/1,000 pages · Tables: ~\$15/1,000 pages · ID documents: ~\$2.50/1,000 pages	90-day free tier covers the first 1,000 pages of plain-text OCR only (forms/tables/ID are billed from page one). Use <code>AnalyzeDocument</code> with <code>Forms+Queries</code> for structured fields like value/developer/date.
Google Document AI	Comparable per-page pricing, custom extractor training available	Alternative if you're already on GCP; roughly matches Textract on cost for this volume.

Action: create an AWS account, enable Textract, and build (or have a developer build) a small "Custom Queries" template trained on a handful of real title deeds and Oqood contracts so extraction targets your exact fields instead of generic OCR. Budget for a human-review step in the admin panel regardless — semi-structured property documents won't hit 100% automated accuracy.

Email

- **Resend** or **AWS SES** — both are inexpensive at this volume (well under \$10/month for a few hundred emails). Verify the `goldenuae.xyz` domain (SPF/DKIM records) so receipts don't land in spam.

Database & Hosting

- **Supabase** (Postgres + Storage) is the fastest path — free tier covers early testing, paid tier starts around \$25/month.

- **Vercel** for the Next.js app — free tier for testing, Pro tier (~\$20/month/seat) for production custom domains and team features.

SMS/OTP (recommended auth upgrade — see §7)

- **Twilio** or a UAE-local SMS gateway for OTP delivery if you move off phone-as-password.

Domain

- Point `goldenuae.xyz` DNS at Vercel; `/admin` is a route within the same app, not a separate domain, so no extra DNS work is needed for it.

7. Security Notes

Phone-as-password (as specified) is low-entropy and easy to guess at scale. Recommended fix that keeps the same user-facing flow: use the phone number only as an *initial* password, and force an OTP-verified reset on first login (via Twilio or similar). Baseline regardless: bcrypt/argon2 hashing, login rate-limiting, signed short-lived URLs for all document access, and server-side role checks on every `/admin` route.

8. Suggested Build Phases

1. **Phase 1 (2–3 wks)** — Auth, landing page, investor + dependent wizards (manual value entry, no OCR yet), document upload, admin document review, job-order-person model, referral code system.
2. **Phase 2 (2 wks)** — Telr integration, invoice/receipt generation and email delivery, job orders tied to confirmed payment,

property valuation workflow end-to-end.

3. **Phase 3 (1–2 wks)** — Textract integration with human-review fallback, government-stage admin controls, commission ledger polish.
 4. **Phase 4** — Hardening: rate limiting, audit logs on every status change, accessibility pass, load test on the admin queue.
-

9. Go-Live Checklist

- ☐ `goldenuae.xyz` DNS pointed at Vercel
 - ☐ Supabase Postgres provisioned, Prisma schema migrated
 - ☐ S3/R2 bucket created, private, signed-URL policy
 - ☐ Telr merchant account approved, live API keys, webhook registered
 - ☐ AWS Textract enabled, custom extraction template built and tested on real title deeds
 - ☐ Resend/SES domain-verified for `goldenuae.xyz`
 - ☐ Auth mitigation decided and built (§7)
 - ☐ Staff accounts + roles created for `/admin`
 - ☐ First referral codes created for any existing partners/agents
-

10. What the Attached Prototype Actually Does

Implements the full flow above against **simulated OCR and simulated payment**, with real client-side persistence so applications you create show up in the admin dashboard in the same session:

- Home page: hero, about (with the sponsorship explanation), three-product services section with real prices, testimonials, footer.
- Investor wizard: ownership type, mocked document upload, simulated OCR output, live AED 2M eligibility check, optional dependent add-on.
- Dependent wizard: optional sponsor job order link, sponsor documents, per-dependent relationship + checklist (sister/sibling now uses birth certificate).
- Property valuation wizard: property details, document upload, flat AED 5,500 invoice.
- Payment: itemized invoice, method selection, referral code validation with live commission calculation, one job order number per person (or one for a valuation).
- Dashboard: one card per job order, per-job-order document upload, visa stage tracker or valuation progress bar + report download.
- Admin: **Overview** (revenue, job order counts by type, pending reviews, commission owed, a bar chart), **Job orders** (queue + document review + independent DLD/GDRFA/Medical/Biometric/Emirates ID controls, or valuation stage + report value/notes controls), **Referrals** (create codes, set percentage/flat commission, track uses and earnings, mark commissions paid), **Content** (edit homepage copy).

Not real: no file is actually uploaded anywhere, OCR is a randomized simulation, payment doesn't touch Telr or any processor, and no email is actually sent. Section 6 above is exactly what turns each of those on.
